

elongations to break, and said third material being apertured in regions coincident said bond sites;

wherein said first and second extensible webs of said laminate web are apertured at said bond sites and said bond site has an aspect ratio greater than about 3.

19. (Twice Amended) A laminate web having a plurality of apertures, said laminate web comprising:

- (a) a first and second extensible webs comprising a material selected from the group consisting of nonwoven, polymeric film, and combinations thereof, being joined and apertured at a plurality of discrete bond sites having an aspect ratio greater than about 3;
- (b) a third material disposed between said first and second extensible webs; and
- (c) the first and second extensible webs being in fluid communication via the apertures and having distinct regions being differentiated by at least one property selected from the group consisting of basis weight, fiber orientation, thickness, and density.
